Characterization of Business Practices

Set of general best practices for small firms

- McKenzie and Woodruff (2017) identify set of 26 business practices most closely associated with business performance
 - Validated in 7 countries in Asia, Africa, and South America
 - 4 major domains of business practices
 - 1 Book-keeping and accounting
 - 2 Financial planning
 - 3 Inventory management and stock control
 - 4 Marketing

→ Strong persistent component at one-year endline ($r = 0.59$)

→ How exactly should we think about business practices translating into performance gains?

Business Practices in the Production Decision

Standard Production Decision

- Owner maximizes output $Y = f(A, L, M, K)$ at given wealth W :

$$\max_{K, M, L} \{ p f(A, L, M, K) - wL - sM - rK \}$$

$$\text{s.t. } wL + sM + rK \leq \lambda W$$

.. where L is labor, M is materials, and K is capital.

.. where w the cost of labor, s the cost of raw materials, r cost of capital, and p is the output price

.. where A represents a productivity factor and λ parameterizes borrowing constraints

Business Practices in the Production Decision

Standard Production Decision

- Owner maximizes output $Y = f(A, L, M, K)$ at given wealth W :

$$\max_{K, M, L} \{ p f(A, L, M, K) - wL - sM - rK \}$$

$$\text{s.t. } wL + sM + rK \leq \lambda W$$

.. where L is labor, M is materials, and K is capital.

.. where w the cost of labor, s the cost of raw materials, r cost of capital, and p is the output price

.. where A represents a productivity factor and λ parameterizes borrowing constraints

- 2 general conceptualizations of business practices

- 1 As factor of production B chosen by owner at market price p_B

- 2 As technology affecting productivity factor A

(See, e.g., Bloom et al., 2016; McKenzie and Woodruff, 2017)

Knowledge

Business Practices in the Production Decision

■ Further specific channels of potential impact

- 1 Better **negotiation practices** may affect raw material prices s
- 2 **Record-keeping** and **financial planning practices** may affect borrowing constraints λ through banks' willingness to lend (see, e.g. Bruhn and Zia, 2013)
- 3 **Marketing practices** may affect output price p by changing demand

→ Plausible association between business practices and revenues, profits, and business growth

→ Prices (p , s , and p_B) and inputs (K , L , and M) likely endogenous to business practices B

PART I: Lecture

Business Practices and Performance

Using panel data and a model that treats managerial capital as technology, **Bloom et al. (2016)** find differences in management practices account for about 30% of cross-country TFP differences

- Robust correlation with productivity in **mid-sized and large firms**, and in the **public sector** (**Bloom et al., 2015, 2020**)
- Robust correlation with performance and firm survival across industries and contexts in **small firms** (**McKenzie and Woodruff, 2017**)

Open questions

- Does adoption of best practices *cause* performance to increase?
- How can adoption of practices best be encouraged?

History and Prevalence

- At least **USD 1 billion per year** (for ~ 4-5 million entrepreneurs; McKenzie, 2020)
- Classical training programs *precede* evidence that business practices vary and are predictive for productivity
- Examples:
 - Start and Improve Your Business (ILO)
 - Business Edge (IFC)
 - EMPRETEC Entrepreneurship Training Workshop (UNCTAD)

Typical Training Program

Stylized facts on MSME trainings

- Group of 15 to 40 entrepreneurs per trainer
- **In-class** (may incl elements of active and interactive learning)
- Period of up to two weeks
- Foci of typical syllabi
 - **Encourage start-up**: Business ideas and business plans, permits, costing, pricing, and budgeting
 - **Grow existing businesses**: Record-keeping, accounting, and financial planning, marketing, human resources and hiring, stock and inventory management
- Average training program not inexpensive (USD 177 per person for ILO training; **van Lieshout and Mehta, 2017**)
 - Typical training program **highly subsidized**
(Median contribution 10% of full price)

Impact on Performance

First wave of evaluations

- Headline result: **No impact on business performance**
 - Modest short-term adoption of practices (long-term fade-out)
 - Null-effect on business sales and profits
 - Early examples: Field et al. (2010); Karlan and Valdivia (2011); Bruhn and Zia (2013); also Giné and Mansuri (2021, WP in 2014)

Impact on Performance

Econometric and implementation issues (McKenzie and Woodruff, 2014)

- Lack of statistical power with MDEs often substantially above policy-relevant levels
 - Small samples (typically $N = 200 - 400$ per treatment cell)
 - Typical attendance between 40 and 70%
 - Often substantial rates of survey attrition (up to 24 – 28%)
 - Large heterogeneity in age, education, training delivery and costs, etc.

Impact on Performance

Econometric and implementation issues (McKenzie and Woodruff, 2014)

- Lack of statistical power with MDEs often substantially above policy-relevant levels
 - Small samples (typically $N = 200 - 400$ per treatment cell)
 - Typical attendance between 40 and 70%
 - Often substantial rates of survey attrition (up to 24 – 28%)
 - Large heterogeneity in age, education, training delivery and costs, etc.
- Endline follow-ups typically short-term (typically 1-2 years out)
- Sources of selection bias by treatment status
 - Firm survival can be endogenous on treatment
 - Record-keeping likely to increase reporting accuracy
 - Clear potential for differential experimenter demand effects
- Most trainings offered at no private costs
 - Potentially lower valuation, utilization (see, Maffioli et al., 2020)

Refinements of the classical model

- Targeting **specific subgroups** of the population
 - Alleviating **particularly severe constraints**
→ Marginalized or disadvantaged groups (e.g., women, youth)
 - Maximizing **treatment impact** or cost-effectiveness
→ Promising entrepreneurs (e.g., high-growth firms)
 - Plus: **Maximizing statistical power** through homogeneity
- Training of **specific clusters of business practices**
 - Alleviating **specific constraints**
 - Investigating mechanisms of treatment impact

Targeted Training

Female entrepreneurs

- Examples:
 - Gender and Enterprise Together (GET Ahead, ILO; Bulte et al., 2017; McKenzie and Puerto, 2021)
 - Start and Improve Your Business (SIYB, IFC; de Mel et al., 2014)
- Most common type of targeted training (complementary to classical microfinance model)
- Structural reasons
 - Women overrepresented in mere subsistence entrepreneurship
 - Female entrepreneurs often subject to more severe constraints (e.g., due to household-level reallocation; see Bernhardt et al., 2019; de Mel et al., 2009a)

 - Initial positive impact on business entry
→ **Effects taper off after 4 years** (no evidence for lasting effects)

High-growth businesses ("gazelles")

- Extensive-margin prediction of future MSE growth is hard (**Fafchamps and Woodruff, 2017**)
 - Survey, ability measure, expert panel all explain unique variation
 - But: **Business training for predicted gazelles shows no impact**
- **McKenzie (2017)** finds **more encouraging results with a large-scale, high-stakes business plan competition** in Nigeria
- Small literature on business accelerators and incubators
 - See, e.g., **Cusolito et al. (2021)**; **Gonzalez-Uribe and Leatherbee (2018)**; **González-Uribe and Reyes (2021)**

On-site Consulting

Stylized facts on business consulting

- Three-step procedure
 - 1 Diagnosing practices
 - 2 Identifying areas of improvement
 - 3 Joint and interactive problem solving
- Typically one-on-one (also group-based; see, [Iacovone et al., 2021](#))
- Sustained and intensive
 - Total of 88 to 200 hours and more ([Anderson and McKenzie, 2020](#); [Bruhn and Schoar, 2018](#))
 - Typically several months
 - Meetings monthly to twice weekly, 2-4 hours
 - Total cost between [USD 4,000 and 12,000 per firm](#) ([Anderson and McKenzie, 2020](#); [Bruhn and Schoar, 2018](#))
- Often gov't-subsidized (private contributions typically ~10%)
 - [Matching-grant programs](#)

On-site Consulting

Example: Matching grant program for MSMEs in Mexico (Bruhn and Schoar, 2018)

- Weekly 4-hour visits over one year
- USD 12,000 per person (subsidized at 70 – 90%)
- Small positive impacts on profits and ROA after 1 year
- Using admin data, 57% higher employment after 5 years
 - Limited availability of admin data may introduce selection bias
 - Not clear if effects concentrated among few businesses

FIG. 3.—Average daily wage bill (US dollars) in the treatment and control groups over time (administrative data). Source: Administrative data from the Mexican Social Security

Variation in Outcome Measures

Alternative measures of business profits (de Mel et al., 2009b)

- 15-16 unannounced visits during one month
- Random assignment of profit measure, accounting diaries, and recall span

1 Self-reported profits most accurate measure

→ Correlation with sales-minus-expenditures only $r = 0.3$

2 Accounting diaries have no effect on profits (but on sales)

3 With recall over 4 months vs. 1 month, entrepreneurs understate revenues by 10 – 15% due to memory loss

4 Entrepreneurs estimate average rival business to underreport sales by 30%

Variation in Outcome Measures

Survey media and frequencies (Garlick et al., 2019)

- 12-week panel with detailed measurements of employees, assets, profits, sales, transfers, etc.
- Random assignment to different survey modes and frequencies
 - 1 Monthly in-person
 - 2 Weekly in-person
 - 3 Weekly phone
- Survey medium
 - All survey modes generally result in similar statistical moments
 - Phone surveys yield higher within-firm variation
(And may be more vulnerable to social desirability bias.)
- Survey frequency
 - Higher frequency generally does not alter statistical moments
 - No evidence for higher attrition

Heterogeneity of Impact

Heterogeneity of treatment effects poorly understood across different approaches

- Potential constraints are manifold, and likely context-dependent
- Some more obvious constraints:
 - Credit constraints (e.g., Berge et al., 2015; Giné and Mansuri, 2021)
 - Education and literacy constraints
 - Gender norms and constraints

→ More recent literature highlights additional behavioral constraints

Education and literacy

Most MSE entrepreneurs have limited education

McKenzie and Woodruff: *Business Practices in Small Firms in Developing Countries*
Management Science, 2017, vol. 63, no. 9, pp. 2967–2981, ©2016 INFORMS

Table 1. Summary Statistics

	Full sample		Means by country						
	Mean	SD	Bangladesh	Chile	Ghana	Kenya	Mexico	Nigeria	Sri Lanka
Male	0.23	0.42	0.99	0.09	0.78	0.00	0.00	0.85	0.47
Owner's age	41.0	12.6	41.9	36.6	39.3	35.7	45.3	30.9	37.3
Years of education	9.7	4.1	9.7	10.0	14.0	9.0	8.6	14.8	10.8
Digitspan recall	4.5	2.1	5.4	n.a.	6.5	5.0	3.3	7.5	6.4
Raven test score	5.0	2.9	n.a.	n.a.	n.a.	6.9	4.9	4.4	3.2
...
Number of observations	20,400		1,724	158	335	3,532	10,265	1,725	2,661

Notes. "n.a." denotes not asked in this data set. Business practice score is the proportion of 26 business practices used by the firm. Marketing (seven practices), buying and stock (three practices), record-keeping (eight practices), and financial planning (eight practices) are subcomponents.

- Typical micro-entrepreneur is a high-school dropout
- Test scores on digitspan and Raven's matrices about % of Western university samples (comp.)

Potential for heuristics and rules of thumb

- Example: Heuristics-based business training program by [Drexler et al. \(2014\)](#)
 - Discussed under [alternative approaches](#)
- See also, [Cole et al. \(2018\)](#) and [Arráiz et al. \(2019\)](#)

Family and neighborhood

Family commitments

- Unequal responsibilities for child care (Delecourt and Fitzpatrick, 2021)
 - Audit study with mystery shoppers among drug stores in Uganda
 - Average gender profit gap of 60%
 - Close to all women have ≥ 1 child, breastfeed for median 19.8 months
 - Among female entrepreneurs, those with child at work ..
 - .. are out of stock more often, and stock up less.
 - .. have 48% lower profits.

Family and neighborhood

Family commitments

- Unequal responsibilities for child care (Delecourt and Fitzpatrick, 2021)
 - Audit study with mystery shoppers among drug stores in Uganda
 - Average gender profit gap of 60%
 - Close to all women have ≥ 1 child, breastfeed for median 19.8 months
 - Among female entrepreneurs, those with child at work ..
 - .. are out of stock more often, and stock up less.
 - .. have 48% lower profits.

Market segregation

- Markets can be geographically (and socially) segregated, especially in residential areas
 - Potential demand constraints (in the spirit of Hardy and Kagy, 2020, studying women in Ghana)
 - (Scant work, but seems important.)

Dynamic complementarities in skill acquisition

Complementarities in skills

- Clusters of skills may be more valuable in combination
 - Record keeping and financial planning complement each other
- Skills may build on each other
 - Profit calculation relies on record keeping
 - Advanced inventory management relies on record keeping (and profit calculation)

Learning styles

- Exploration-exploitation trade-off
 - Not clear how much to exploit available best practice, and how much to invest in search for innovation
 - Psychological research finds interpersonal differences in [preference for information search](#) (see, e.g., [Hills et al., 2016](#); [Schulz et al., 2020](#); [Gonzalez and Dutt, 2011](#))
 - If technology has initial fixed costs, poverty *per se* may affect trade-off

Aspirations

Aspirations theory (following Dalton et al., 2016)

- Aspirations are **desired level of outcome**
- In theoretical work, aspirations are modeled as **reference-dependent preferences**
 - Agent derives utility from relative level wrt aspirations
→ Aspirations motivate effort
 - Behavioral constraint: **Agent neglects outcomes** → aspirations

Aspirations

Aspirations theory (following Dalton et al., 2016)

- Aspirations are **desired level of outcome**
- In theoretical work, aspirations are modeled as **reference-dependent preferences**
 - Agent derives utility from relative level wrt aspirations
→ Aspirations motivate effort
 - Behavioral constraint: **Agent neglects outcomes** → aspirations

- Consequence: Sufficiently **poor agents** with sufficiently **low aspirations** choose suboptimally low effort
→ Potential for **behavioral poverty trap**

Aspirations

Evidence on aspirations in entrepreneurship

- Descriptive evidence that **micro-entrepreneurs show sizable growth aspirations** (Dalton et al., 2018)
 - Both short-term and long-term, for growth in size, labor, and sales
 - Entrepreneurs update dynamically given new information

Rules of Thumb

Core idea: Provide **simplified rules** to make training more cognitively accessible

- Example:
 - Instead of detailed accounting practices, ..
 - .. focus on **physical separation of household and business finances**
 - .. and only transfer money with an explicit **"IOU" note**
- Classical study: **Drexler et al. (2014)**
 - Comparison of heuristics-based and standard accounting training with 1,193 micro-entrepreneurs in the Dominican Republic
 - Null effect for full sample
 - Statistical power limited due to substantial missing sales data
 - **Larger gains with heuristics-based training for less educated entrepreneurs**

Rules of Thumb

- Arráiz et al. (2019) compare 4-hours heuristics-based finance training with standard finance and accounting program among 2,408 micro-entrepreneurs in Ecuador
 - Heuristics-based training increases daily business sales and profits by about 8% each
 - Effects driven by women and entrepreneurs with lower cognitive scores
- Points of critique
 - Limited target group of cognitively challenged
 - Limited scope (mostly confined to accounting practices)
 - So far no long-term follow-up (studies use 1-year endlines)
 - Cole et al. (2018) find more mixed evidence for text-based rule-of-thumb assistance among micro-entrepreneurs in India and The Philippines

Entrepreneurial mindset

Core idea: **Develop proactive mindset and increase growth aspirations**

- Examples:
 - Encourage continued search for new opportunities
 - Encourage reflection on business differentiation
 - Learning by doing and from mistakes
 - Set daily goals
- **Campos et al. (2017)** compare mindset training to standard business training among 1,500 micro-entrepreneurs in Togo
 - 36 hours classroom instruction
 - 4 monthly 3-hours one-on-one follow-ups by trainer
 - USD 750 per person
 - Initiative training improves business profits by 30% over 2.5 years
(Standard business training improves profits by 11%)
 - Costs amortized within a year through firm profits

Local Knowledge and Mentoring

Local entrepreneurs as mentors

■ Core ideas:

- Information may be highly localized
- Peers may know better about particular local constraints and practices
- Social learning may work better between peers
- Local mentors may be more cost effective

→ Who mentors?

→ Will mentors agree to share information?

→ How to incentivize continued mentoring?

Local Knowledge and Mentoring

- Successful business owners mentor smaller firms (Brooks et al., 2018)
 - Random assignment of mentors or standard business training to 372 female micro-entrepreneurs in Kenya
 - Mentorship dyads
 - Mentors local entrepreneurs from more profitable firms
 - Encouragement of weekly meetings at mentor's firm for one month
 - Many dyads continue meeting for more than one year
 - Mentored businesses show increases in profits by 20%
 - → Effect fades after one year (when dyad dissolves)
 - No effect of standard business training.
- McKenzie and Puerto (2021) find no impact of a 5-months mentoring scheme among female micro-entrepreneurs in Kenya

Local Knowledge and Mentoring

Peer-to-peer learning

- Core idea: Firms may improve through mutual social learning
- Firms matched among peers (Cai and Szeidl, 2018)
 - Random assignment of peer group meetings among 2,820 SMEs in China
 - Monthly meetings with 9 peers for 10 months
 - Peer groups of different sizes and sector compositions
 - Sales increased by 8 – 10%
 - Comparable increases in material inputs, employment, and assets

PART II: Paper *Curating Local Knowledge*

Takeaways

- Business practices differ substantially across firms ..
 - .. and vary with productivity
- Standard business training has limited ability to change practices and firm performance in the short-term ..
 - .. while long-term evidence is scarce
- Some of that is due to measurement error (especially wrt firm profits) and lack of statistical power ..
 - .. but extensions of classical approach also show promise:
 - Personal initiative training
 - Business mentoring
 - Peer-to-peer learning

Background

- Micro and small firms (MSEs) are typically the main **source of employment** in the developing world
- In **Indonesia**, MSEs represent ..
 - .. 99% of all firms
 - .. 94.5% of employment
- Understanding the factors fostering efficiency and growth of MSEs is an important research and policy goal

Harnessing Cross-Firm Heterogeneity

Some stylized facts about business practices in small firms

- Vast heterogeneity in business practices and performance across similar businesses (McKenzie and Woodruff, 2017; de Mel et al., 2009b)
- Variation in practices accounts for up to 30% of variation in TFP across plants within the same firm in the US (Bloom et al., 2019)
→ Research has largely overlooked this heterogeneity in program design and implementation

Conclusion

Harnessing Cross-Firm Heterogeneity

Some stylized facts about business practices in small firms

- Vast heterogeneity in business practices and performance across similar businesses (McKenzie and Woodruff, 2017; de Mel et al., 2009b)
- Variation in practices accounts for up to 30% of variation in TFP across plants within the same firm in the US (Bloom et al., 2019)
→ Research has largely overlooked this heterogeneity in program design and implementation

We make productive use of this heterogeneity in our research design:

- Use cross-firm variation to identify practices associated with business performance
- Curation of local best practices
- Test different modes of delivery, and their cost-effectiveness

Conclusion

Selecting Local Best Practices

Detailed **qualitative interviews** with local business peers

- Understand and codify their practices (record-keeping, financial planning, stocking-up, marketing, and joint decision-making)
- Identify implementation norms and beliefs regarding each practice (e.g. whether they are complicated, necessary, etc.)
- Document locally relevant tips and rule of thumbs

Quantitative baseline survey

- Measure practices and outcomes
- Quantitative association of business practices with profits and sales

Discussion

Conclusion

Disseminating Knowledge

Basic information intervention

- Handbook
 - Pure information on profitable practices, implementation advice

Two complementary behavioral interventions

- Movie of successful peers
 - Psychological and emotional involvement
 - Social learning through observing experiences of similar others
(see, e.g., Bernard et al., 2014; La Ferrara et al., 2012; Chong and La Ferrara, 2009; Berg and Zia, 2017)
- On-site assistance
 - Hands-on involvement
 - Social learning through own idiosyncratic experience
 - Facilitated by local lay person
 - Movie and assistance based exclusively on handbook!

Research Questions

Characterization of local best practices

- Which practices are associated with high profits?
- How do successful businesses implement them?

Adoption of best practices

- Do retailers adopt best practices once aggregated and made common knowledge?
- If so, does the type of experiential involvement matter?

Impact on business performance

- Does adoption increase firm profits?
- If so, what are the channels?

Sample

- Listing of 2042 small retail businesses from 29 sub-districts ("kelurahan") in urban Jakarta
- Selection criteria for firm listing:
 - At least $4m^2$ in size
 - At least two different product categories on offer
 - At least 30 meters distance to next business in sample → to minimize spillovers
- Random sample of 1301 from the list
- Randomization to treatment arms stratified by
 - Gender
 - Firm space ($4-6m^2$, $6-10m^2$, 10 and above m^2)
 - Composite score of business practices above or below median
 - Sub-district

Why you should try these best practices in your shop

*Evidence from a large-scale study
on Jakarta-based retailers*

RECORD-KEEPING

Shop owners who keep business records report 28% higher monthly sales and 26% higher monthly profits than those who do not keep business records.

Shop owners who track their customers' debts report 40% higher monthly sales and 36% higher monthly profits than those who do not track their customers' debts.

STOCK-UP SCHEDULING

Shops that maintain stock-up schedules earn 26% more in monthly sales and 25% more in profits than those that do not maintain stock-up schedules of their primary products.

Shops that stock up daily rather than weekly earn 48% more in monthly sales and 37% more in monthly profits.

Conclusion

Efficiency Gains?

Impact on business practices → **efficiency practices:**

- Adjust stocks based on product profitability
- Negotiate lower prices with suppliers
- Consult with former customers
- Offer discounts
- Make joint decisions
- Review performance to identify ways to improve
- Make anticipated budget for upcoming costs

Conclusion

Efficiency Gains?

Impact on business practices → **efficiency practices**:

- Adjust stocks based on product profitability
- Negotiate lower prices with suppliers
- Consult with former customers
- Offer discounts
- Make joint decisions
- Review performance to identify ways to improve
- Make anticipated budget for upcoming costs
 - **Non-record-keeping practices**
 - Causal mediation analysis: **Stocking up and marketing practices** drive performance impact
 - Variance in profits among treated firms does not converge
 - **Efficiency gains**

Conclusion

Business Knowledge or Aspirations?

Impact on practice adoption and business performance may work through ..

- .. acquisition of **business knowledge** and/or
- .. strengthening of **growth aspirations**

We directly measure **business aspirations** ..

- .. at baseline, midline, and endline
- .. for short (one year) and long ("ideal business") time horizons
- .. for various dimensions of potential business expansion
 - Sales on a normal day
 - Physical size
 - Customers on a normal day
 - Employees

→ **No impact on aspirations**

→ Performance likely driven by increase in **business knowledge**

Results

Discussion

Conclusion

Business Stealing?

Do treated businesses improve performance at the expense of the control?

- Sales and profits of **control businesses do not decrease** from baseline to endline (roughly equal)
- Sales and profits of control businesses **closer to treated shops do not decrease by more** than those further away
 - **No evidence for business stealing**

Conclusion

Cost-Effectiveness

Small costs (per firm):

- Cost Handbook alone: USD 100
- Cost Handbook & Movie: USD 125
- Cost Handbook & Assistance: USD 125
- Cost Handbook & Movie & Assistance: USD 150

Substantial Benefits

- Up to USD 330 per month in profits
- Adoption of top practices by retailers

Research design likely **scalable and portable**

Takeaways

- Curating local knowledge has value for business growth
- Information alone does not have impact, only combined with behavioral interventions
- Mechanism likely knowledge-based, not aspirations-based
- Behavioral interventions are inexpensive and scalable
 - Attractive for policy
